

Dear FCC:

I believe that the 160 meter band should have proper mode segmentation similar to other amateur radio bands.

I fully support the proposed FCC Petition RM-10352 to restrict wideband usage to above 1.843 MHz. The 1.800 to 1.843 MHz segment should be reserved for CW operation. FCC Regulation Part 97.307 (f) should be changed to clearly state this logical band plan. This action will reduce

the tendency for mode conflicts in the traditional "weak signal" or "DX"

part of the band, as volunteer compliance to ARRL suggested band plans can unfortunately, not be assumed.
